

EXERCISE 3: POSTED SEPTEMBER 22 2021

DUE: SEPTEMBER 29th, 2021, 11:59 PM

- **CREATE A SIMPLE BUT EFFECTIVE VISUAL COMPOSITION:**
 - **ONLY** use the HTML 5 Canvas and JavaScript → **NO** external libraries (p5, jQuery etc... - you WILL lose points for using them.)
 - **MUST** have at least **ONE custom object definition**, and make sure that this object is instantiated and used in your composition
 - **ANIMATE** at least one of the components
 - **HAVE** at least one event listener -> and make sure that the event triggered **ACTIVATES** one of your components (i.e., I can click on a sphere). This component should **ALSO CHANGE OVER TIME** in some way when activated by the event.
- **BONUS (1%+):**
 - **IMPLEMENT** the functionality for reading a text file from the user (FILE API)
 - **USE** the text from this file as input data for your visual composition (above)
- **MAKE** a Link on your personal website
- **UPLOAD** your exercise to your personal website directory and make it linkable
- **PROVIDE** only the URL as the submission on Moodle.
- **IF you use any examples from published resources (i.e., the internet): PLEASE cite the sources – again you will NOT get marks off for sourcing and adapting from examples.**

GRADING CRITERIA:

Creativity

Good coding practices

Code runs without errors

Followed the brief

Interactivity and User Experience

ANY questions or coding issues: do not hesitate to contact me on discord/email/zoom/ in person during the computation lab hours ... (You will NOT lose points when asking for help)
